

With the many changes in today's society and after a great deal of research we have built a corporate style computer data center.

This facility has been built around redundant T-1 internet connection that provides a strong connection to the outside world. This allows us to upload and download information at significant transfer rates which include but are not limited to video streaming. We have also built at the core of this facility several file servers running a number of industry standard server software products and they are all interconnected to provide a wide range of data services that facilitate and enhance the capabilities of our clientele. We have also added a Voice Over IP (Internet Protocol) telephone system that provides us with powerful in-house capabilities as well as

the ability to project our technology via the internet. With our long standing relationships with industry leading corporations we have put in place cutting edge capabilities that small business, local government and individual's can take advantage of as this society has become more competitive with each innovation.

We continue to add technology as we grow and with the more work we do, the greater our capability grows to service our clientele. We are focused on making technology available to everyone and helping everyone become more familiar with the potential at their fingertips. As we provide access to this technology we need to make sure that we also want to provide access to information and the knowledge to use it to help to improve quality of life across the board throughout our community.

We are reaching out to everyone in our community in our efforts to establish working relationships and allow others to take advantage of the technology we have built in to the center. Using our technology resources we can offer a broad range of products and services that can help in the normal course of doing business and everyone can benefit from the use of these resources. We look forward to meeting members of our community and establishing relationships. The power of technology can make a difference and we are working to make sure that power is available to everyone.

*Join us as the Adventure continues . . .*

*Technology for the Rest of Us*

---

The services that are provided from our Data Center are designed to help users gain access to the resources they need. The capabilities that are most desirable to help the users compete in an ever changing high tech world.
